FACTS AND TIPS

WHAT IS IT MADE OF?

⇒ A highly weatherable, extremely durable Engineering Thermoplastic.

WILL THE COPPER CHIP OR PEEL?

⇒ No. The electroplating process used to apply the copper creates an extremely strong bond between the materials.

WILL IT CRACK OR DENT?

⇒ No. This is the same type of plastic material used in automotive bumpers. It is extremely tough and resilient. Hail will not dent it.

WILL IT CHANGE COLORS OVER TIME?

⇒ Our copper is 99.9% alloy free which will patina, verdigris and react to chemical acceleration at the same rate as sheet metal copper products.

WHY IS THE COST SO MUCH LOWER THAN SHEET METAL PRODUCTS?

⇒ We have simply applied today's technology to an age old craft to enable us to offer beautiful products to every homeowner.
