

# Curved Valleys

The lengths and quantities of the valley parts depends on the size of the dormer; radius and material. Maximum use of material is determined by our programming.

Quotes are based on actual length of radius valley flashing including overlaps. Non-radiused vertical flashing is not included in the base price but may be added upon request.

**We offer the curved parts for curved valleys in the following materials:**

|                                 |          |
|---------------------------------|----------|
| Aluminum (mill or Kynar finish) | .032     |
| Steel (mill or Kynar)           | 24 gauge |
| Copper                          | 16 ounce |

For other materials contact ACM.

The overlapping parts of the valley should be plumbed from above!

\* Manufacturer recommends the use of sealant at lap joints.
