valspar

American Construction Metals Rainware Systems are finished with Valspar Polykote® 3000 coatings. Polykote® 3000 is field proven coating for multiple purpose polyester finishes designed for a wide range of applications. They are applied to long life products: such as rain carrying equipment, trim coil, and awnings. The reliable adhesion and flexibility properties of Polykote® 3000 provides superior post forming performance to enhance the coated product's appearance and durability for years to come.

RAINWARE Color Palette

RAINWARE Systems

Why your home needs an ACM Rainware System:

Foundation Preservation: To preserve the integrity of your home's foundation it is important to keep its surrounding soil moist. Inconsistent moisture can make the soil contract and pull away from the foundation, resulting in compromised support and cracked masonry. ACM rainware systems direct roof runoff away from your home's foundation thereby helping to keep the soil moisture level consistent.

Stain Prevention: An ACM rainware system will eliminate the "splashback" caused by roof runoff hitting the ground next to the foundation. Splashback contains soil, minerals and grass, which can cause unsightly stains on your foundation that, with time, become hard to remove.

Landscape Preservation: Directing roof runoff safely off the roof and away from your plants will save them from receiving the damaging full force of rain. It will also prevent overwatering, which could result in the development of harmful fungi.

Outstanding Protection: ACM's 20-year transferable warranty is the longest warranty in the business.

Color Selection and Consistency: ACM has one of the most extensive color selections available in the industry. All products are color-matched out of our own coil to ensure true color from part to part.

Quality Control Measures: ACM controls every aspect of the manufacturing process to ensure all products meet or exceed industry standards for quality.
